Sir:

- I, Noriaki YUKIMURA, in care of 3·1·1, Ogawahigashi-cho Kodaira-shi, Tokyo, Japan, declare that:
- 1. I graduated from The University of Tokyo in doctor's course of Graduate School of Science majoring chemistry in March 2007, and joined BRIDGESTONE CORPORATION in April 2007. Then, I have been engaged in the research and development of compounding ingredients for rubber compositions in Tire Material-Development Department up to the present.
- 2. I am familiar with the subject matter disclosed in the application.

3. Experiment

Object of Experiment

In order to clarify differences of various physical properties between "Example 2 of this invention described in the specification" and "Examples 1, 4 and 5 of Scholl et al." and between "Examples 5, 6, 7 and 9 of this invention described in the specification" and "Examples 2, 6 and 7 of Scholl et al.", the following experiments were conducted.

Procedure of the Experiment

The compounding recipes except for the silane compounds having sulfur atom and the production procedures for the above rubber compositions are the same as Example 1 of this invention described in the specification. These experiments were conducted by the equimolar amounts of the silane compounds having sulfur atom.

Test Methods

The evaluation items and the test methods are the same as those described in the specification of this invention.

Result

The results obtained are shown in the following Tables A and B.
